Measured temporal visual-belief effects at archived Real-pose prefixes
Formal main success
CVR correction
CVR degradation
Dense Top-1 goal error (m)
Recorded observation step
real
zero
shuffle
no-belief
20 m goal radius
birmingham_block_5:8:4
birmingham_block_5:8:5
birmingham_block_5:33:0
Belief L1 (unitless)
Entropy change (nats)
Top-1 = dense-logit argmax; controls are matched-path belief interventions, not their independent rollout paths.
Left: formal model. Middle/right: separate CVR checkpoint. No RGB, raster, or scene pixels in this figure.
